Course Overview

This course is an introduction to three-dimensional computer graphics. Students will learn both theory of 3D computer graphics, and how to program it efficiently using OpenGL. Topics include 2D and 3D transformations, Bézier and B-Spline curves for geometric modeling, interactive 3D graphics programming, computer animation, kinematics, and rendering including ray tracing, shading, and lighting. There will be an emphasis on the mathematical and geometric aspects of computer graphics. This course is regularly offered every semester (the instructor may vary as well as the

46

Prerequisites

Math

- Math 225 (Linear Algebra and Differential Equations)
- Familiarity with calculus and linear algebra

Coding

- CSCI 104 (Data Structures and Object-Oriented Design)
- C/C++ programming

Textbooks

Interactive Computer Graphics

- A top-down approach with OpenGL, Fifth Edition, Edward Angel, Addison-Wesley

OpenGL Programming Guide (“Red Book”)

- Basic version also available on-line (see Resources)

Grading

Exercises

- Ex 1: 16 %
- Ex 2: 17 %
- Ex 3: 17 %

Exams

- Midterm: 20% (one sheet of notes only, in class)
- Final: 30% (one sheet of notes only)

Academic Integrity

- Do not copy any parts of the assignments from anyone
- Do not look at other student's code
- Collaboration only for the project
- USC Office of Student Judicial Affairs and Community Standards (Hell) will be notified
- Don't cheat, mkay?

Assignment Policies

Programming Assignments

- Hand in via Blackboard by end of due date
- Functionality and features
- Style and documentation
- Artistic impression

3 late days, usable any time during semester

Academic integrity policy applied rigorously

Computer Graphics

One of the “core” computer science disciplines:

- Algorithms and Theory
- Artificial Intelligence
- Computer Architecture
- **Computer Graphics**
- Computer Security
- Computer Systems
- Computer Vision
- Databases
- Machine Learning
- Networks
- Software Engineering

Course Overview

Theory / Computer Graphics Disciplines

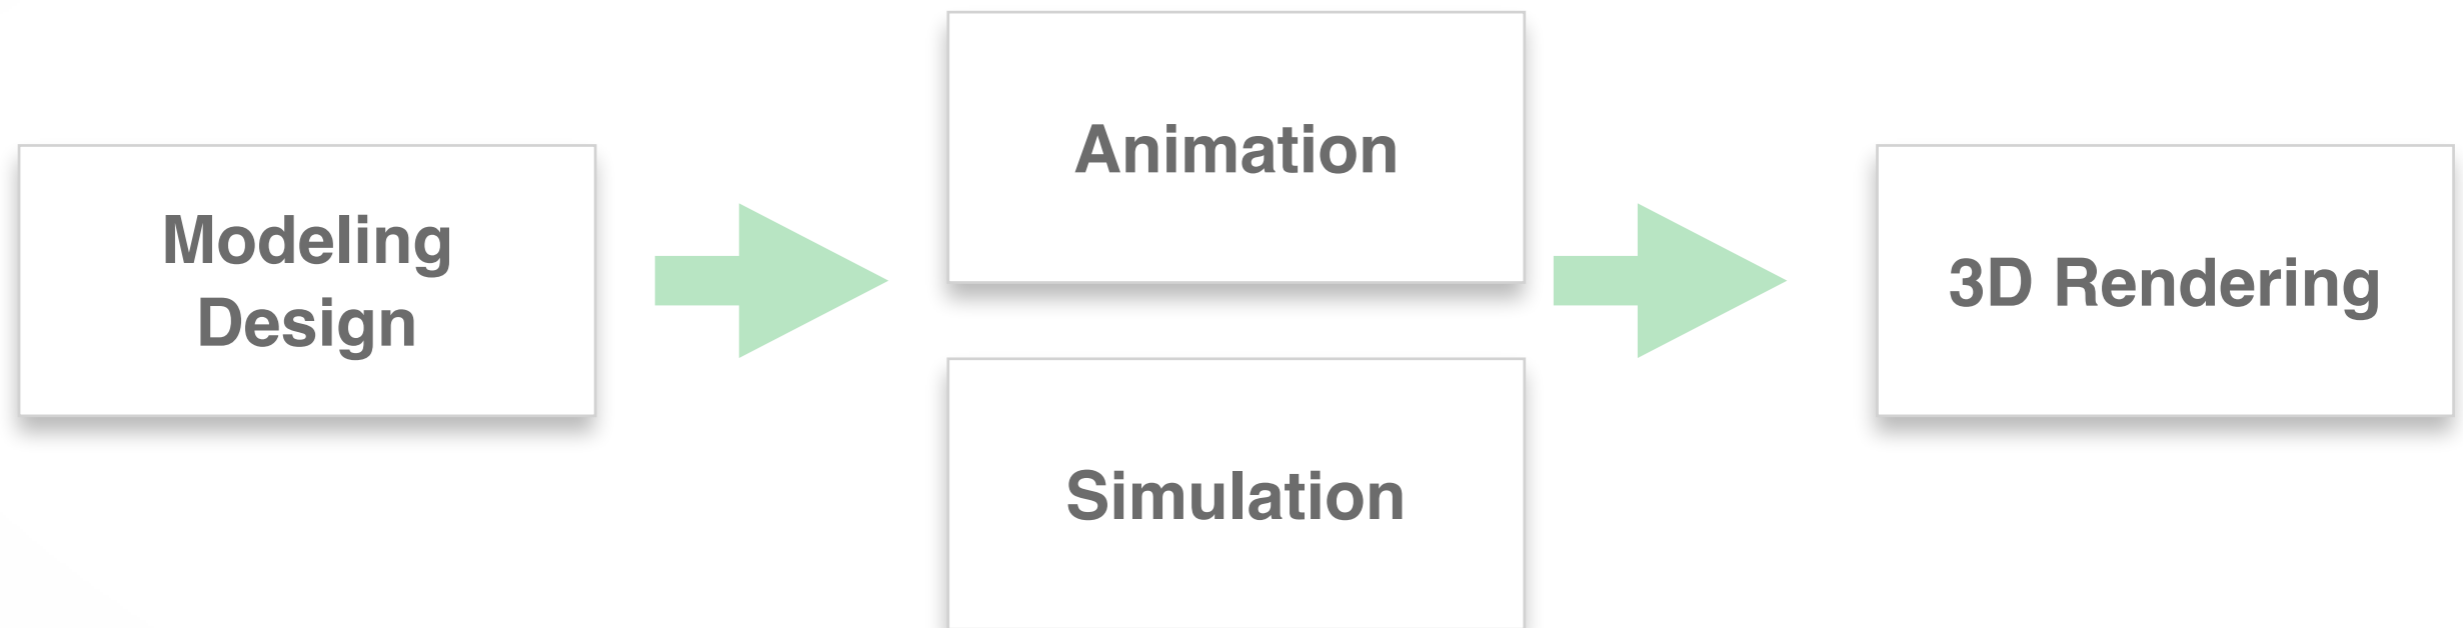

- Modeling: how to represent objects
- Animation: how to control and represent motion
- Rendering: how to create images of objects
- Image Processing: how to edit images

Practice: OpenGL graphics library

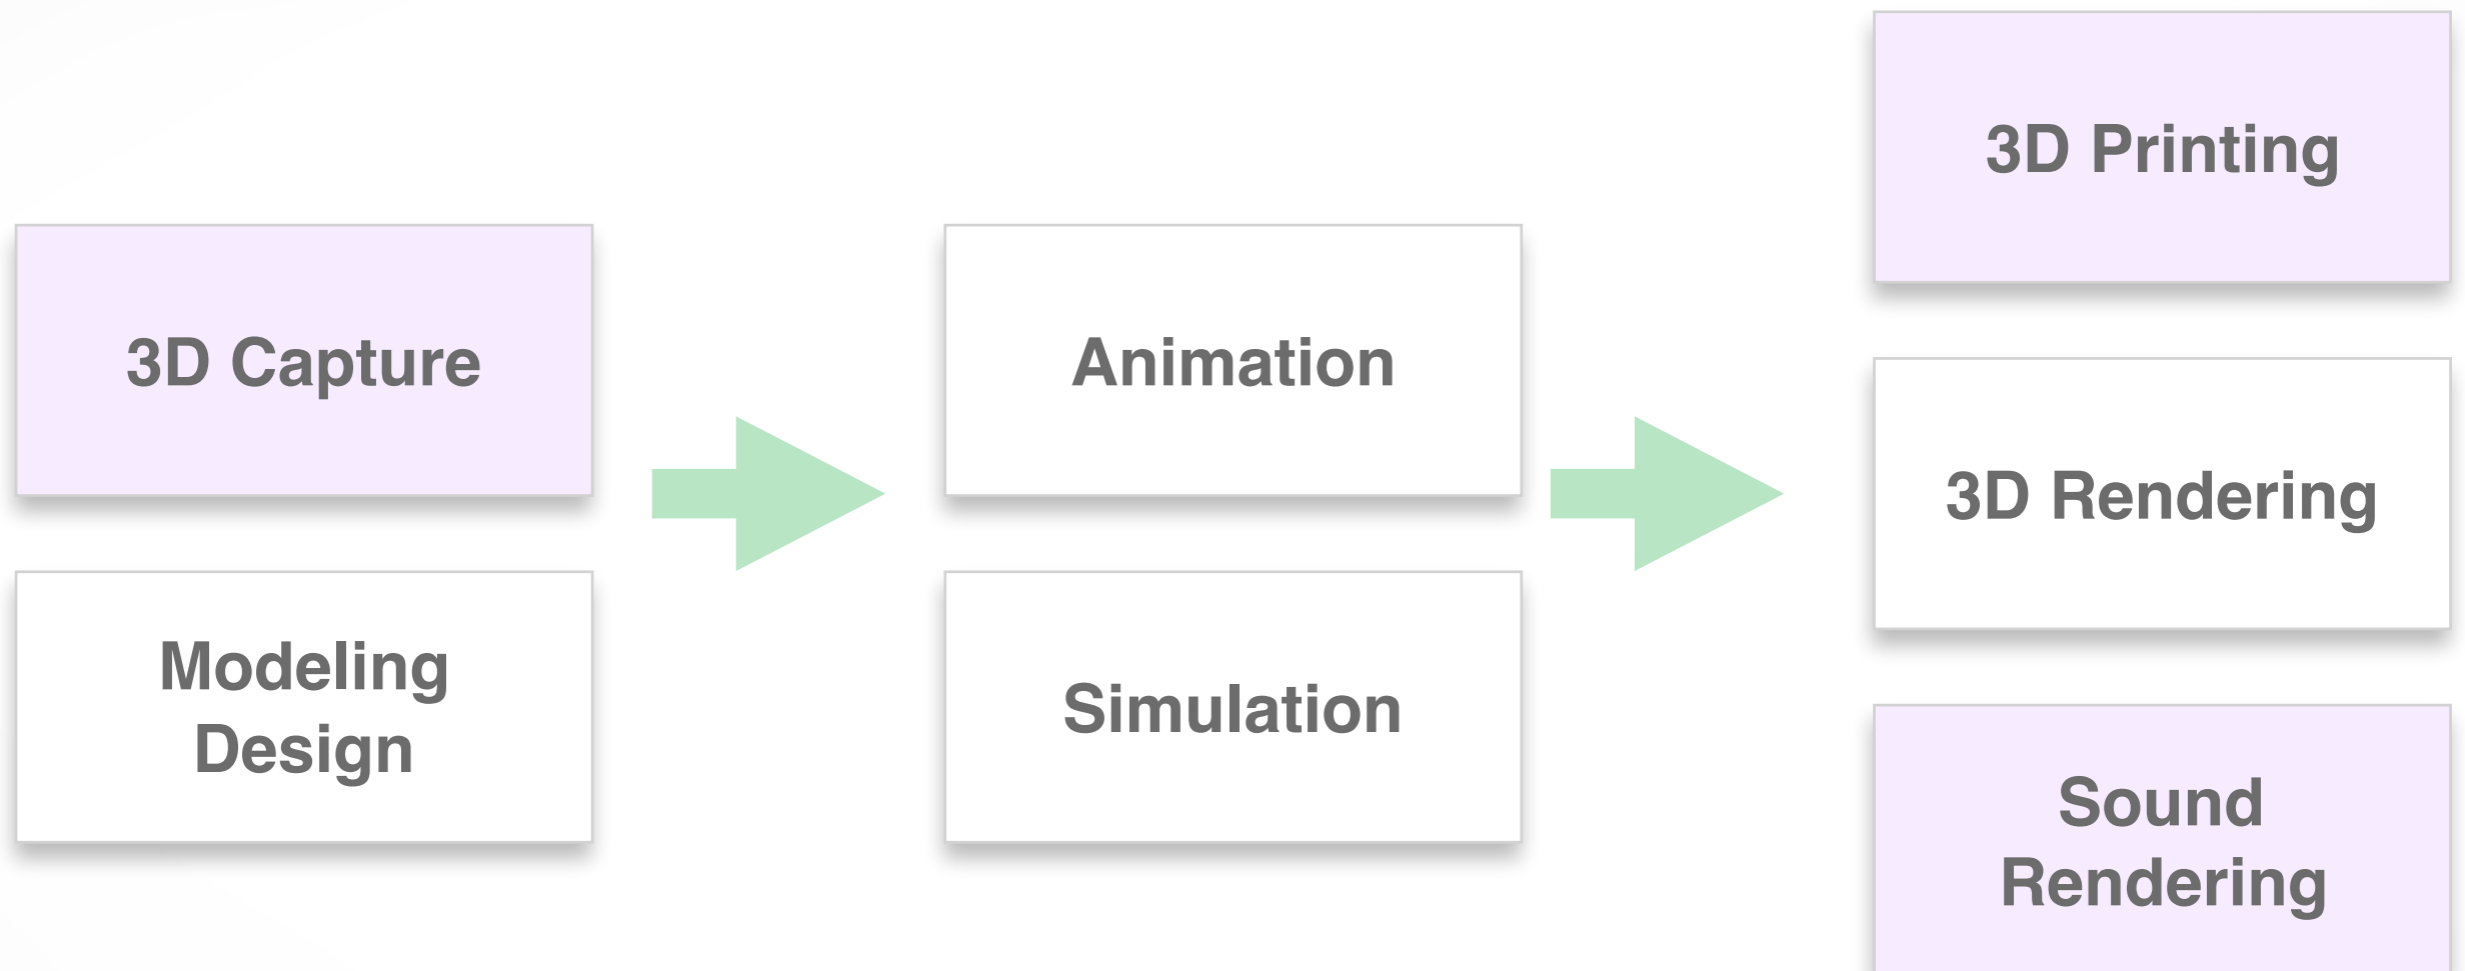

Not in this course:

- Human-Computer Interaction
- Graphic Design

3D Computer Graphics Pipeline

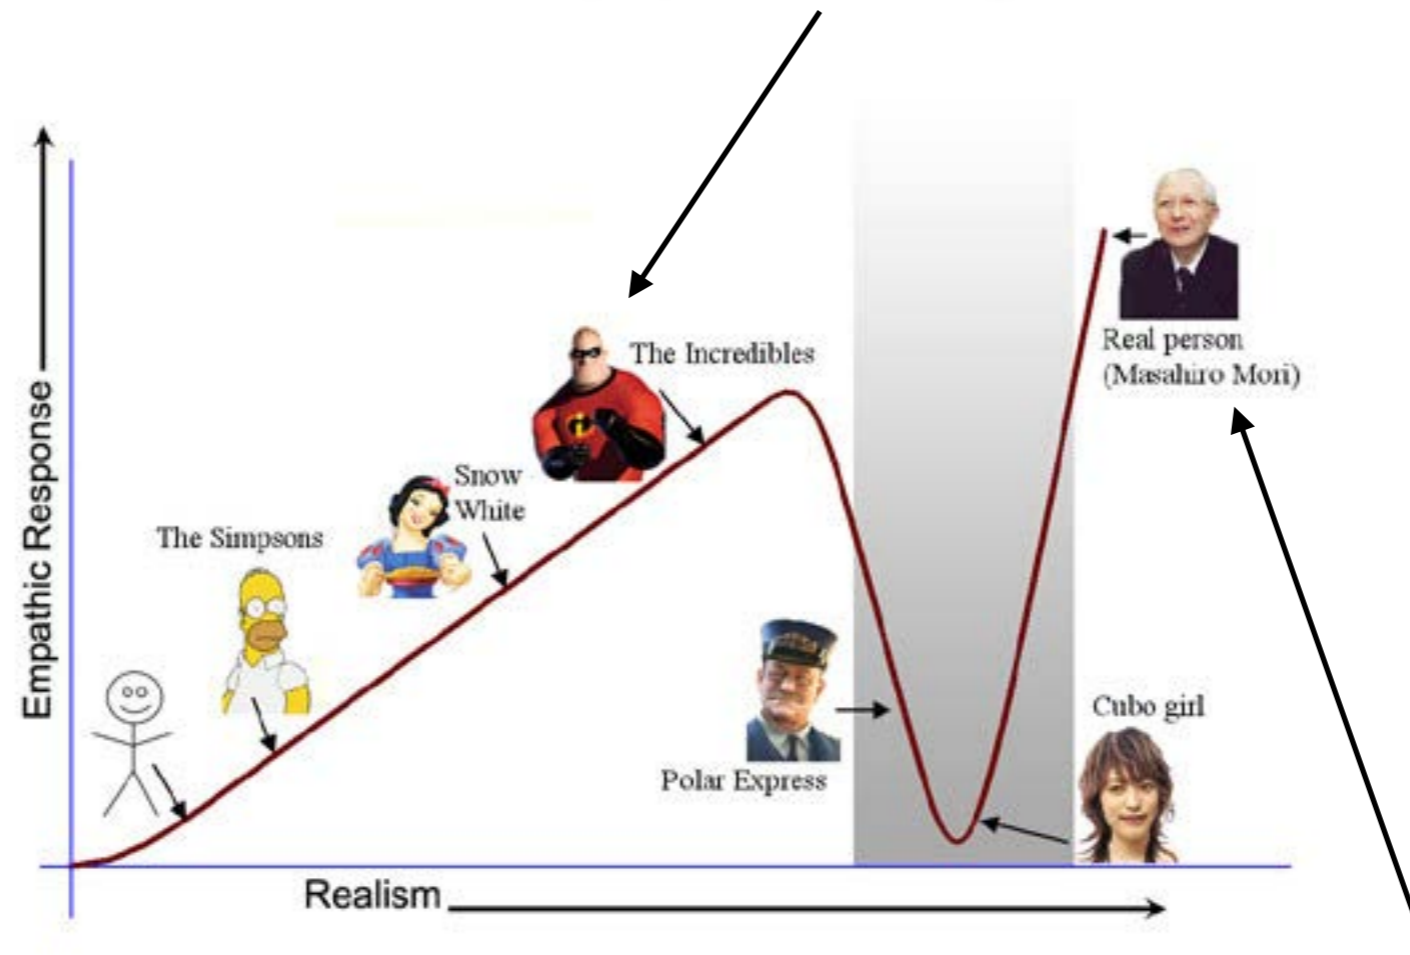

Emerging Fields

Goals in Computer Graphics

Creating a new reality (not necessarily scientific)

Practical, aesthetically pleasing, in real time

Synthetic images indistinguishable from reality

Practical, scientifically sounds, in real time

SIGGRAPH & SIGGRAPH Asia

- Main computer graphics event
- Twice a year
- up to 30K attendees
- Academia, industry, artists

Course Overview

1.1 Introduction

- Graphics@USC
- What is Computer Graphics?
- Administrative Stuff
- Course Overview
- Research Trends

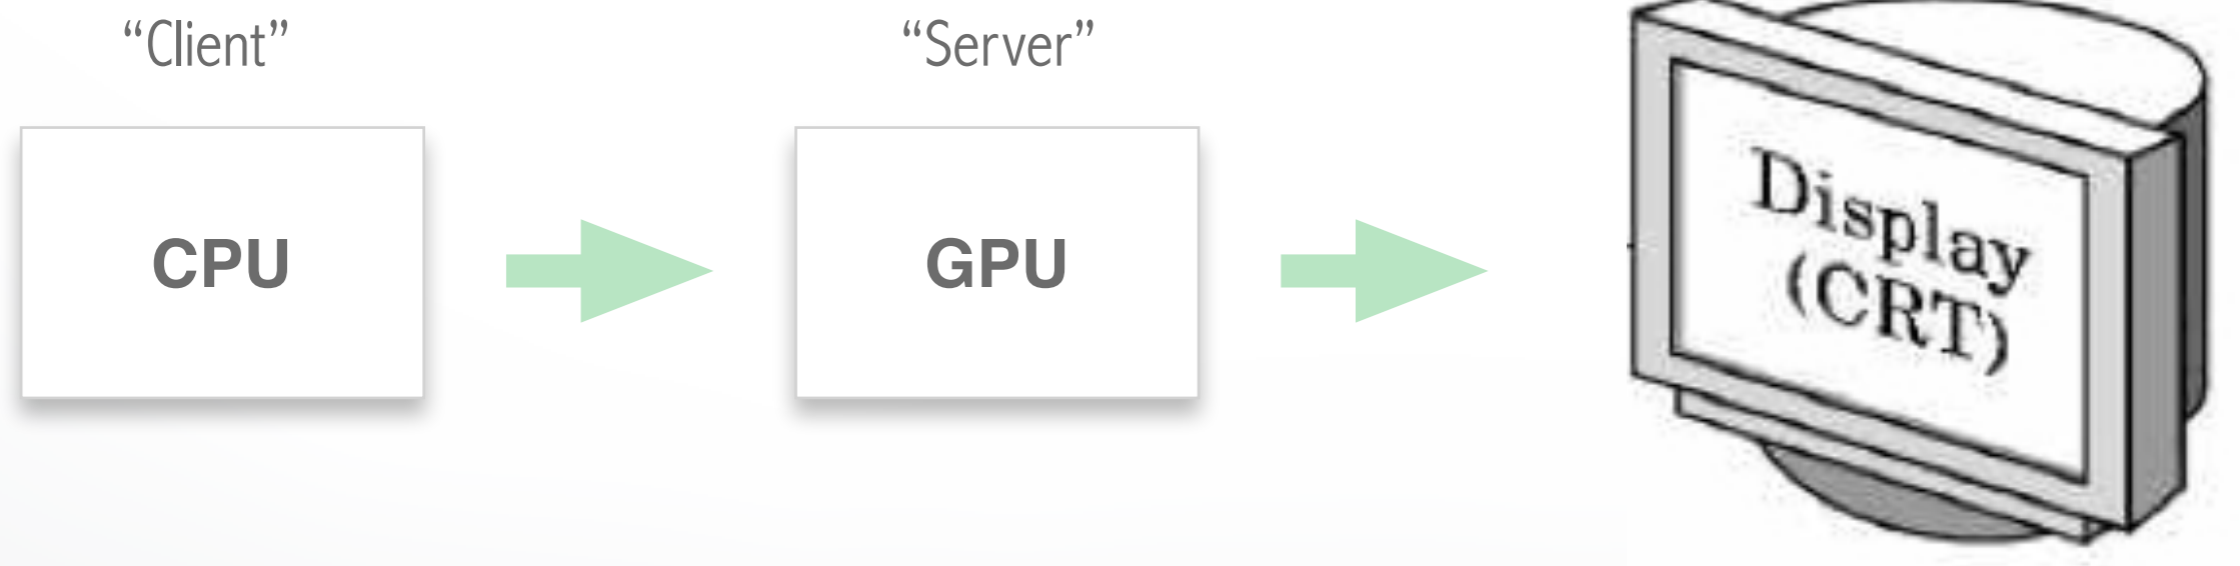

1.2 OpenGL Basics

- Primitives and attributes
- Color
- Viewing
- Control functions
- [Angel, Ch. 2]

2.1 Input & Interaction

- Clients & servers
- Event driven programming
- Text & fonts
- [Angel, Ch. 3]

2.2 Objects & Transformations

- Linear algebra review
- Coordinate systems and frames
- Rotation, translation, scaling
- Homogenous coordinates
- OpenGL transformations
- [Angel, Ch. 4]

3.1 Viewing and Projection

- Orthographic projection
- Perspective projection
- Camera positioning
- Projection in OpenGL
- Hidden surface removal
- [Angel, Ch. 5]

3.2 Hierarchical Models

- Re-using objects
- Animations
- OpenGL routines
- Parameters and transformations
- [Angel, Ch. 10]

4 Curves & Surfaces

- Recall 3D calculus
- Explicit representation
- Implicit representation
- Parametric curves & surfaces
- Hermite curves and surfaces
- Bézier curves and surfaces
- Splines
- Curves and surfaces in OpenGL
- [Angel, Ch. 12]

5.1 Light & Shading

- Light sources
- Ambient, diffuse, and specular reflection
- Normal vectors
- Material properties in OpenGL
- Radiosity
- [Angel, Ch. 6]

Tobian R. Metoc

5.2 Rendering

- Clipping
- Bounding boxes
- Hidden-surface removal
- Line drawing
- Scan conversion
- Anti-aliasing
- [Angel, Ch. 7,8]

6-8 Textures and Pixels

- Texture mapping
- OpenGL texture primitives
- Bump maps
- Environment maps
- Opacity and blending
- Image filtering
- [Angel, Ch. 8]

texture mapping

9-10 Ray Tracing

- Basic ray tracing [Angel, Ch. 13]
- Spatial data structures [Angel, Ch. 10]
- Motion blur
- Soft shadows

11.1 Radiosity

- Local vs global illumination
- Interreflections
- Radiosity equation
- Solution methods
- [Angel Ch. 13.4-5]

11.2 Animation

- Traditional Animation
- Keyframe Animation
- Computer Animation

12 Physically Based Models

- Particle systems
- Spring forces
- Cloth
- Collisions
- Constraints
- Fractals
- [Angel, Ch. 11]

13 Image Processing

- Blending
- Display Color Models
- Filters
- Dithering
- [Angel, Ch 7-8]

14-15 Guest & “Wildcard” Lectures

- Realtime 3D Reconstruction
- Geometry Processing
- Graphics & Machine Learning
- Data-Driven Modeling
- ...

Research Trends
