## CSCI 420: Computer Graphics

### 7.2 Ray Tracing

## Hao Li

## Motivation: Reflections

## Motivation: Depth of Field

## Local Illumination

- Object illuminations are independent
- No light scattering between objects
- No real shadows, reflection, transmission
- OpenGL pipeline uses this

## Global Illumination

- Ray tracing (highlights, reflection, transmission)
- Radiosity (surface inter reflections)
- Photon mapping
- Precomputed Radiance Transfer (PRT)

## Object Space

- Graphics pipeline: for each object, render
- Efficient pipeline architecture, real-time
- Difficulty: object interactions (shadows, reflections, etc.)

## Image Space

- Ray tracing: for each pixel, determine color
- Pixel-level parallelism
- Difficulty: very intensive computation, usually off-line

## First idea: Forward Ray Tracing

- Shoot (many) light rays from each light source
- Rays bounce off the objects
- Simulates paths of photons
- Problem: many rays will
- miss camera and not contribute to image!
- This algorithm is not practical

## Backward Ray Tracing

- Shoot one ray from camera through each pixel in image plane

## Generating Rays

## Generating Rays

- Camera is at $(0,0,0)$ and points in the negative $z$-direction
- Must determine coordinates of image corners in 3D

## Generating Rays

aspect ratio $=w / h$

## Generating Rays

side view

side view

## Generating Rays

$\mathrm{a}=$ aspect ratio $=\mathrm{w} / \mathrm{h}$

## Determining Pixel Color

1. Phong model (local as before)
2. Shadow rays
3. Specular reflection
4. Specular transmission

Steps (3) and (4) require

recursion.

## Shadow Rays

- Determine if light "really" hits surface point

## light source

## Phong Model

- If shadow ray can reach to the light, apply a standard Phong model

$$
I=L\left(k_{d}(l \cdot n)+k_{s}(r \cdot v)^{\alpha}\right)
$$

## camera

light source

## Where is Phong model applied in this example?

## Which shadow rays are blocked?

## Reflection Rays

- For specular component of illumination
- Compute reflection ray (recall: backward!)
- Call ray tracer recursively to determine color

## Angle of Reflection

- Recall: incoming angle = outgoing angle
- $r=2(l \cdot n) n-l$
- Compute only for surfaces that are reflective

## Reflections Example

www.yafaray.org

## Transmission Rays

- Calculate light transmitted through surfaces
- Example: water, glass
- Compute transmission ray
- Call ray tracer recursively to determine color

## Transmitted Light

- Index of refraction is speed of light, relative to speed of light in vacuum
- Vacuum: 1.0 (per definition)
- Air: 1.000277 (approximate to 1.0)
- Water: 1.33
- Glass: 1.49
- Compute t using Snell's law
- $\eta_{l}=$ index for upper material
- $\eta_{t}=$ index for lower material

$$
\frac{\sin \left(u_{l}\right)}{\sin \left(u_{t}\right)}=\frac{\eta_{t}}{\eta_{l}}=\eta
$$

## Translucency

- Most real objects are not transparent, but blur the background image
- Scatter light on other side of surface
- Use stochastic sampling (called distributed ray tracing)

## Transmission + Translucency Example

www.povray.org

## The Ray Casting Algorithm

- Simplest case of ray tracing

1. For each pixel $(x, y)$, fire a ray from COP through $(x, y)$
2. For each ray \& object, calculate closest intersection
3. For closest intersection point p

- Calculate surface normal
- For each light source, fire shadow ray
- For each unblocked shadow ray, evaluate local Phong model for that light, and add the result to pixel color
- Critical operations
- Ray-surface intersections
- Illumination calculation

## Recursive Ray Tracing

- Also calculate specular component
- Reflect ray from eye on specular surface
- Transmit ray from eye through transparent surface
- Determine color of incoming ray by recursion
- Trace to fixed depth
- Cut off if contribution below threshold

## Ray Tracing Assessment

- Global illumination method
- Image-based
- Pluses
- Relatively accurate shadows, reflections, refractions
- Minuses
- Slow (intersection computations)
- Aliasing
- Inter-object diffuse reflections require many bounces

## Raytracing Example I

www.yafaray.org

## Raytracing Example II

www.povray.org

## Raytracing Example III

www.yafaray.org

## Raytracing Example IV

www.povray.org

## Summary

- Ray Casting
- Shadow Rays and Local Phong Model
- Reflection
- Transmission
- Next lecture: Geometric queries

## Thanks!
