## CSCI 420: Computer Graphics

### 8.2 Spatial Data Structures

## Hao Li

http://cs420.hao-li.com

## Ray Tracing Acceleration

- Faster intersections
- Faster ray-object intersections
- Object bounding volume
- Efficient intersections
- Fewer ray-object intersections
- Hierarchical bounding volumes (boxes, spheres)
- Spatial data structures
- Directional techniques
- Fewer rays
- Adaptive tree-depth control
- Stochastic sampling
- Generalized rays (beams, cones)

## Spatial Data Structures

- Data structures to store geometric information
- Sample applications
- Collision detection
- Location queries
- Rendering
- Spatial data structures for ray tracing
- Object-centric data structures (bounding volumes)
- Space subdivision (grids, octrees, BSP trees)
- Speed-up of 10x, 100x, or more

## Intersection of Rays and Implicit Surfaces

- Wrap complex objects in simple ones
- Does ray intersect bounding box?
- No: does not intersect enclosed objects
- Yes: calculate intersection with enclosed objects
- Common types:

Convex Hull

## Selection of Bounding Volumes

- Effectiveness depends on:
- Probability that ray hits bounding volume, but not enclosed objects (tight fit is better)
- Expense to calculate intersections with bounding volume and enclosed objects
- Amortize calculation of bounding volumes
- Use heuristics

## Hierarchical Bounding Volumes

- With simple bounding volumes, ray casting still requires $\mathrm{O}(\mathrm{n})$ intersection tests
- Idea: use tree data structure
- Larger bounding volumes contain smaller ones etc.
- Sometimes naturally available (e.g. human figure)
- Sometimes difficult to compute
- Often reduces complexity to $\mathrm{O}(\log (\mathrm{n}))$

## Ray Intersection Algorithm

- Recursively descend tree
- If ray misses bounding volume, no intersection
- If ray intersects bounding volume, recurse with enclosed volumes and objects
- Maintain near and far bounds to prune further
- Overall effectiveness depends on model and constructed hierarchy

## Spatial Subdivision

- Bounding volumes enclose objects, recursively
- Alternatively, divide space (as opposed to objects)
- For each segment of space, keep a list of intersecting surfaces or objects
- Basic techniques:

Uniform
Spatial Sub

Quadtree/Octree

kd-tree

BSP-tree

## Grids

- 3D array of cells (voxels) that tile space
- Each cell points to all intersecting surfaces
- Intersection algorithm steps from cell to cell

## Assessment of Grids

- Poor choice when world is non-homogeneous
- Grid resolution:
- Too small: too many surfaces per cell
- Too large: too many empty cells to traverse
- Can use algorithms like Bresenham's for efficient traversal
- Non-uniform spatial subdivision more flexible
- Can adjust to objects that are present

## Outline

- Hierarchical Bounding Volumes
- Regular Grids
- Octrees
- BSP Trees

## Quadtrees

- Generalization of binary trees in 2D
- Node (cell) is a square
- Recursively split into 4 equal sub-squares
- Stop subdivision based on number of objects
- Ray intersection has to traverse quadtree
- More difficult to step to next cell

## Octrees

- Generalization of quadtree in 3D
- Each cell may be split into 8 equal sub-cells
- Internal nodes store pointers to children
- Leaf nodes store list of surfaces
- Adapts well to non-homogeneous scenes

## Assessment for Ray Tracing

- Grids
- Easy to implement
- Require a lot of memory
- Poor results for non-homogeneous scenes
- Octrees
- Better on most scenes (more adaptive)
- Alternative: nested grids
- Spatial subdivision expensive for animations
- Hierarchical bounding volumes
- Natural for hierarchical objects
- Better for dynamic scenes

## Other Spatial Subdivision Techniques

- Relax rules for quadtrees and octrees
- k-dimensional tree (k-d tree)
- Split at arbitrary interior point
- Split one dimension at a time
- Binary space partitioning tree (BSP tree)
- In 2 dimensions, split with any line
- In k dims. split with k-1 dimensional hyperplane
- Particularly useful for painter's algorithm
- Can also be used for ray tracing

## Outline

- Hierarchical Bounding Volumes
- Regular Grids
- Octrees
- BSP Trees

## BSP Trees

- Split space with any line (2D) or plane (3D)
- Applications
- Painters algorithm for hidden surface removal
- Ray casting
- Inherent spatial ordering given viewpoint
- Left subtree: in front, right subtree: behind
- Problem: finding good space partitions
- Proper ordering for any viewpoint
- How to balance the tree

## Building a BSP Tree

- Use hidden surface removal as intuition
- Using line 1 or line 2 as root is easy

Viewpoint

## Splitting of Surfaces

- Using line 3 as root requires splitting

## Building a Good Tree

- Naive partitioning of $n$ polygons yields $O\left(n^{3}\right)$ polygons (in 3D)
- Algorithms with $\mathrm{O}\left(\mathrm{n}^{2}\right)$ increase exist
- Try all, use polygon with fewest splits
- Do not need to split exactly along polygon planes
- Should balance tree
- More splits allow easier balancing
- Rebalancing?

## Painter's Algorithm with BSP Trees

- Building the tree
- May need to split some polygons
- Slow, but done only once
- Traverse back-to-front or front-to-back
- Order is viewer-direction dependent
- What is front and what is back of each line changes
- Determine order on the fly

## Details of Painter's Algorithm

- Each face has form $A x+B y+C z+D$
- Plug in coordinates and determine
- Positive: front side
- Zero: on plane
- Negative: back side
- Back-to-front: inorder traversal, farther child first
- Front-to-back: inorder traversal, near child first
- Do backface culling with same sign test
- Clip against visible portion of space (portals)

## Clipping With Spatial Data Structures

- Accelerate clipping
- Goal: accept or reject whole sets of objects
- Can use an spatial data structures
- Scene should be mostly fixed
- Terrain fly-through
- Gaming

## Data Structure Demos

- BSP Tree construction
http://symbolcraft.com/graphics/bsp/index.html
- KD Tree construction
http://donar.umiacs.umd.edu/quadtree/points/kdtree.html

## Real-Time and Interactive Ray Tracing

- Interactive ray tracing via space subdivision http://www.cs.utah.edu/~reinhard/egwr/
- State of the art in interactive ray tracing http://www.cs.utah.edu/~shirley/irt/

## Summary

- Hierarchical Bounding Volumes
- Regular Grids
- Octrees
- BSP Trees
