COMMITMENT

With 3D sensing being democratized, I develop graphics and vision techniques for unobtrusive 3D digitization and analysis of humans in unconstrained settings. My current research focusses on data-driven methods for dynamic shape reconstruction, realtime facial and body performance capture, 3D hair acquisition, and garment digitization. Depth sensors will become an integral part of every computer, mobile device, and living room; and streaming terabytes of data about us and our friends every second over the Internet. I want to build algorithms for collecting and analyzing this data, and learn how to use them to improve our everyday lives. 3D sensors give machines a *human-scale* understanding of space and motion. Our world is 3D, and I want machines to be able to see it like we do.

I have been named one of the world's top 35 innovator under 35 by MIT Technology Review in 2013 and NextGen10: Innovators under 40 by C-Suite Quarterly in 2014. I received the Google Faculty Research Award, the Okawa Foundation Research Grant, and the Andrew and Erna Viterbi Early Career Chair in 2015, the Swiss National Science Foundation fellowship for prospective researchers in 2011, and the best paper award at SCA 2009. I am ranked #1 on Microsoft Academic in 2016 on the top 10 leaderboard in Computer Graphics for the past five years. I am also curator for virtual and augmented reality at the World Economic Forum (WEF).

EDUCATION

- Ph. D., Computer Science** 07/2006 - 11/2010
ETH Zurich, Department of Computer Science
- Thesis: *Animation Reconstruction of Deformable Surfaces*
Advisor: Prof. M. Pauly
- M. Sc., Computer Science** 10/2000 - 01/2006
Universität Karlsruhe (TH), Department of Computer Sciences
- Thesis: *Reconstruction of Colored Objects from Structured Illuminated Views*
Advisor: Prof. H. Prautzsch
 - Major 1: Computer graphics and geometric modeling
 - Major 2: Cryptography and security
 - Minor: Differential and projective geometry
- ERASMUS Student Exchange, Computer Science** 10/2002 - 09/2003
Institut National Polytechnique de Grenoble, ENSIMAG
- French-German High School Diploma** 09/1992 - 05/1999
Lycée Franco-Allemand de Sarrebruck, Germany

SOFTWARE & DATASETS

USC-HairSalon

A large publicly accessible 3D hairstyle database for hair capture, modeling, simulation, and rendering research. This data collection is also a great resource for benchmark and evaluation purposes. My co-authors are Liwen Hu, Chongyang Ma, and Linjie Luo.

Shapify.me

<http://www.shapify.me>

A free application for creating 3D self-portraits directly using Microsoft's Kinect sensor. A person rotates in front of the sensor and the software automatically produces a complete textured digital model of the person. The 3D model can be uploaded to a server and 3D printed. My co-authors are E. Vouga, A. Gudym, and G. Gusev.

ILM's Monster Mirror

Industrial Light & Magic's proprietary depth sensor-driven real-time facial animation system for instantaneous high fidelity facial performance capture for virtual filmmaking. The calibration-free system sets the current bar for realtime facial tracking accuracy and robustness. I co-developed the software with J. Yu, Y. Ye, and C. Bregler.

BeNTO 3D

<http://www.bento3d.com>

An easy to use geometry processing application created exclusively for Mac. The Cocoa based tool distinguishes from other competitors in that development of additional plugins and GUI extensions are considerably simplified.

faceshift

<http://www.faceshift.com>

A software for real-time and markerless facial performance capture using Microsoft's Kinect sensor. The Qt-based application runs on Mac OS X and Windows 7 and is co-developed with T. Weise and S. Bouaziz. Faceshift has been acquired by Apple Inc. and its technology has been incorporated into the iPhone X.

Artec Studio

<http://www.artec3d.com>

Development of a state-of-the-art geometry processing pipeline for aligning and merging non-rigid 3D scan data.
